Description

Forestry Services for Climate Change Mitigation.

GMF designs and operates sustainable forestry projects. It provides a comprehensive service tailored to the needs of each client with a focus on carbon capture as a tool for mitigating climate change. Mission: To promote projects of triple impact: environmental protection, socially responsible and economically productive through the offset of carbon emissions and mitigation of climate change from a sustainable management of forest plantations We are at the service of the client throughout the project as developers, operators, administrators, and traders of forest products. In each process, we make sure to comply with strict quality standards. We offer a comprehensive service tailored to the needs of each client with a focus on carbon capture as a tool for climate change mitigation. With an agile, flexible and long-term team, it offers a unique value proposition to meet the growing demand for cost-effective investment alternatives, with a focus on sustainable production, local development and biodiversity regeneration. Why become interested in Carbon Forest projects? • They mean a profitable long-term low-risk business with significant tax benefits. •

Represents a diversification of productive activities and investment of the company, taking advantage of the sale or internal use of carbon credits. • Through these projects, the company contributes to the mitigation of climate change, local sustainable development and the protection of biodiversity. • Provides the ability to participate in the carbon market, key in the medium and long term, preparing for a global economy restricted in CO2 emissions
